

Edward Hu

bodunhu@utexas.edu | 5125170598 | <https://bdhu.github.io/>

EDUCATION

THE UNIVERSITY OF TEXAS AT AUSTIN | BS COMPUTER SCIENCE& MATHEMATICS Austin, TX | January 2016 - May 2020
GPA: 3.72

COURSEWORK

Concurrency, Operating Systems, Computer Architecture, Algorithms and Complexity, Data Structure, Computational Intelligence in AI

EXPERIENCE

THE UNIVERSITY OF TEXAS AT AUSTIN | STUDENT RESEARCHER Austin, TX | August 2016 – Present

- Cooperate with three team members to develop tools to automate 3-D printer error detection
- Feed object images to a customized neural network to generate accuracy percentage
- Write scripts to dynamically detect and modify different flavors of 3-D printer instructions
- Develop a system to notify users through email when accuracy level drops below certain threshold

SKILLS

PROGRAMMING LANGUAGES	C/C++, Java, Go, Python, Javascript, \LaTeX , Unix shells
FRAMEWORKS	iOS, OpenMP, NodeJS, Tensorflow, Numpy, Matplotlib
TECHONOLOGY	Linux, GCC/Clang, Docker, Nvidia CUDA, Git, Vim, HTML

PROJECTS

PINTOS | A FUNCTIONAL OPERATING SYSTEM IMPLEMENTED IN C

- Implement the scheduling system with multilevel feedback queue and priority donation.
- Implement most system level API such as `exit()` and `kill()`
- Design a virtual memory system with single-level page table implementation
- Construct a Linux-like ext3 file system

PARALLEL K-MEANS ALGORITHM | PERFORMANCE SCALING BY UTILIZING X86 MULTICORE ARCHITECTURE

- Implement K-means algorithm in C++ and distribute computations onto Unix pthreads using C++11 synchronization standard
- Manual implementation of synchronization mechanism such as Mutex, Spinlock, and barrier

MINE SWEEPER | NEURAL NETWORK TRAINING

Implement a three-layer neural network in Python to increase game units' efficiency in sweeping mine using Pygame framework

FILE COMPRESSOR | A JAVA PROGRAM TO COMPRESS AND UNCOMPRESS FILES

A simple Java command line tool using Huffman coding to modify file data in any formats

EXTRACURRICULAR

HACKTX

Austin, TX | January 2016 - May 2020

Design an Android app to extract product order information from Adidas official website with a team of three

CODING BLOG

<https://bdhu.github.io/>

Share my personal experience and difficulties encountered during programming, and new features of programming languages.

LINUX KERNEL HACKING

I'm mostly interested in memory management subsystem and how virtualization is utilized.
